(57) Abstract:

PROBLEM TO BE SOLVED: To provide a method for manufacturing an NOx occluding reduction catalyst for cleaning exhaust gas, wherein a noble metal carried is not covered with the NOx occluding material carried and the noble metal can be carried in a uniform distribution state.

SOLUTION: In this method for manufacturing an NOx occluding reduction catalyst comprising a carrier, a noble metal carried on the carrier and at least one kind of NOx occluding element selected from alkali metals, alkaline earth metals and rare-earth elements carried on the carrier, the NOx occluding element is carried on the carrier in an adsorptively carrying step using an NOx occluding element source which is a compound containing NOx occluding elements.
